EDUCATION

Master's in Artificial Intelligence, *Universidad Adolfo Ibañez* May 2019 – December 2022
Informatics Engineering, *Universidad Tecnológica de Chile INACAP* March 2007 – June 2012

EXPERIENCE

- Cofounder, CTO**, *Kalamar.digital* June 2024 – Present
- Developed a platform to automate digital marketing campaign performance optimization, maximizing the return on ad spend, built with AWS serverless backend and Next.js on CloudFront frontend.
 - Built a serverless email marketing application leveraging highly parallel processing to scale audience reach in our go-to-market strategy.
- Senior Software Engineer**, *Moder Solutions - Adfitech and Cornerstone* December 2022 – December 2024
- Standardized service versioning, and CI/CD process.
 - Defined cloud infrastructure as code using AWS Cloudformation and Terraform.
 - Implemented a serverless python application to deploy build artifacts across different AWS accounts.
- Cloud Leader**, *ComunidadFeliz/HappyHOA* June 2021 – October 2022
- Managed the Cloud team, working with the CTO, planning and executing to improve architecture and operation.
 - Evangelize company vision among other teams to align architectural decisions with business needs.
 - Enabled teams to do their own deployments and monitoring, in order to ship features and fixes faster.
- Cloud Engineer**, *ComunidadFeliz/HappyHOA* February 2021 – June 2021
- Involved in CloudOps (deployments, monitoring and maintenance).
 - Planned and implemented improvements like canary and blue-green deployments.
 - Created read replicas to be able to scale our database layer.
- Fullstack Developer – Product**, *ComunidadFeliz/HappyHOA* June 2020 – February 2021
- Implemented product features using Ruby on Rails, GraphQL, and React.
 - Fixed performance issues that were causing the system to crash given an increased adoption rate of around 1 million requests per day at the time.
 - Started a tech reading group initiative within the company.
- Fullstack Developer**, *Welcu* July 2016 – March 2020
- Re-implemented Android/Java app for event attendees check-in through QR code.
 - Re-wrote, versioned, and optimized mobile app REST API with Rails backend.
 - Developed company sideproject MPV with Rails, React and GraphQL.
- Cofounder, CTO**, *Lambda IT* January 2014 – May 2016
- Developed products: *Simple Sign* (Digital signature software), *Simple Cases* (Case management system for law firms), *Client Sentry* (Fraud detection software for e-commerce)
- Backend Developer**, *SmartboxTV* January 2012 – December 2013
- Collaborated on building Nunchee, a content management platform for second screen experiences.
 - Implemented a service that would rank TV channels based on Twitter activity.

TECHNICAL SKILLS

Languages: Python, SQL, Javascript, Ruby, R, C++, asm
Frameworks: AWS Lambda Powertools, FastAPI, React, Ruby on Rails
Cloud Technologies: AWS, Docker, AWS SAM, AWS Cloudformation, Terraform
Developer Tools: Git, VS Code, Cursor, Claude Code
Libraries: RSpec, PyTest, PyTorch, Tensorflow, scikit-learn, Pandas, NumPy, Matplotlib
